

Hankraft™

The ultimate paper sack!

Hankraft was originally designed for the paper sack market and has excellent strength and puncture resistance. With its naturally lowslip surface, Hankraft makes stacking easier and safer and enhances pallet stability.

Hankraft is water resistant to offer protection in all weathers and by blending polymers we can achieve a variety of different barrier characteristics.

With its paper-like feel on the outside and smooth polythene lining, Hankraft can adapt to many different uses. The matt or sheen surface is available in a range of colours and Hankraft can be stitched and heat sealed to match your exact closing requirements.

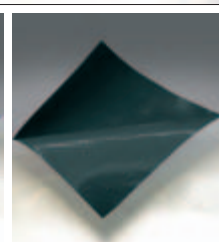

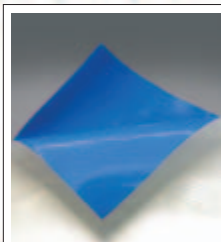

Expect excellent results from high quality, in-house colour printing. We consistently meet strict retail and industrial requirements and Hankraft can even be jet printed with a typical drying time of half a second!

You can rest assured that Hankraft is extensively run on packaging lines and works successfully with most automatic packaging equipment.

And if that is not enough...

- Hankraft complies with the European Food Packaging Regulations for food contact material
- Hankraft sacks require less than a quarter of the storage space required for conventional paper sacks and this also reduces transport costs
- Hankraft is totally recyclable and is up to 50% lighter than the equivalent paper sack
- Hankraft is manufactured in-house by Hanmere under the scope of our BS EN ISO9001:2001 and BRC accreditations

With its multi-layer structure, Hankraft can be produced in dual colours, and with different surface characteristics. Embossing is also available for added pallet stability
